

Rishabh Sisodiya

Full Stack Engineer

rishabh.sisodiya4@gmail.com | +91-7737612493 | Jaipur, India | linkedin.com/in/rishabhsisodiya

PROFESSIONAL SUMMARY

Full Stack Engineer with 8.5+ years across React.js, Node.js, and AWS, building web applications, backend services, data pipelines, and internal tooling end to end. Shipped production code on a global platform serving thousands of members, cut processing overhead by ~60% by modernizing legacy automations, owned a DynamoDB/Informix-to-Redshift pipeline feeding BI, and served as technical point of contact for a major enterprise client. Comfortable leading small teams: mentoring engineers and guiding day-to-day delivery.

CORE SKILLS

Frontend	React.js, Next.js, JavaScript, TypeScript, Redux
Backend	Node.js, NestJS, Express.js, FastAPI, Spring Boot, REST APIs, Microservices
Cloud & DevOps	AWS EC2, Lambda, ECS, Docker, CircleCI, Jenkins, Nginx
Databases	PostgreSQL, DynamoDB, MySQL, Redshift, Informix
Tools	Git, Jira, Looker / LookML, Zendesk, AppDynamics, ServiceNow

PROFESSIONAL EXPERIENCE

Lead Engineer | Wipro Limited

Jul 2021 – Present

Client: Topcoder

Full Stack Engineering

- Shipped features and production fixes across Node.js services and the React frontend of the Topcoder community platform and internal tools, serving thousands of members globally, via code-reviewed PRs in Scrum sprints.
- Legacy Google Apps Script automations needed manual steps; rebuilt them as production-grade Node.js services, cutting processing overhead by ~60%.
- Technical point of contact for Topgear, one of the platform's largest clients: advised their engineers on API integration and automation design, and resolved their operational issues with data-fix scripts and interim workarounds.
- Owned Java data loaders on EC2 moving data from DynamoDB and Informix into Redshift, the source of truth for Looker dashboards and downstream automation, covering monitoring, failure recovery, and reliability.
- Built 5 Zendesk apps for the support team (bulk email with auto ticket creation for a payment-provider migration, bulk challenge extensions, auto-SPOC CC, dynamic links, requester-info panel), cutting repetitive agent work.
- Built LookML models and Looker dashboards giving community, delivery, and support teams real-time visibility into SLAs and operational health.
- Extended a NestJS reporting API to replace Looker as the reporting layer for those SLA and operational metrics, delivered in a week using Cursor AI.
- Mentored a junior engineer through delegated automation work, design feedback, and pair programming; worked with contractors to isolate root causes of production issues.

Production Support

- Own L1/L2 support and incident handling for business-critical apps: triage, root cause analysis, stakeholder updates, and post-mortems, patching faults directly from logs, APIs, and database state.
- Maintained Marathon Match automation and set up EC2 scoring environments for competitions run for clients such as NASA.

React.js · Next.js · Node.js · NestJS · Java · AWS EC2 · Lambda · ECS · DynamoDB · Informix · PostgreSQL · Redshift · Docker · CircleCI · Looker · Zendesk

Senior Software Engineer | Capgemini India Pvt. Ltd.

Feb 2018 – Jun 2021

Client: Discover Financial Services

- Developed enterprise React.js + Redux applications for merchant onboarding, handling complex multi-step forms and approval flows.
- Built Spring Boot REST services integrated with IBM MQ for reliable event-driven messaging across distributed financial systems.
- Automated operational and monitoring processes, reducing manual reporting effort and speeding up incident response in a regulated environment (AppDynamics, ServiceNow).

React.js · Redux · Spring Boot · Core Java · IBM MQ · REST APIs · Jenkins · AWS · AppDynamics · ServiceNow
